## WIFI NETWORK

Ensure that the password used to connect to your wireless network is strong and different from any other personal password. Only give out this password to people you trust.

## DEVICES

Identify all devices connected to your wireless home network and make sure they are secure. Always turn on automatic updates. Disconnect old/unused devices from your network.

## ****  PASSWORDS

Use a strong, unique password for your devices and online accounts. Enable two-step verification when available, especially for your online accounts.

## BACKUPS

Do regular backups of important information on all devices. Verify that you can restore files if there is a problem.
